Joker's Viewtech I Mirrors

Unique "Pocketed" aircraft milling design along the stem for lightness. VIEWTECH mirror stems and heads are completely CNC machined from billet aluminum (not cast), light-weight, strong and fully adjustable in every direction to fit just about everyone. Once the mirror is positioned, a simple twist of a wrench keeps them at your desired tension setting right where you want them, unlike the competition's non-adjustable designs that fail with time. The swivel post assembly is completely serviceable and is machined from stainless-steel alloy to ensure corrosion free operation. Available in show chrome or hard black anodized finishes. A direct bolt-on fit for late model Harley hand controls (including V-Rod) and most aftermarket hand controls!

TAILLIGHT FUNCTION

Kellermann  **LED** 

Kellermann Micro1000. Indicator, rear taillight and brake light

It combines indicator, rear and brake light, based on our tried and tested High Power LED technology in a metal housing, giving motorcycles a new, individual appearance. The micro 1000 DF is the smallest ECE-approved indicator, brake and rear light combination, which replaces the existing brake and rear light, featuring Long Life Protection Guard (CR). Silent rubber elements, which protect the part from vibrations and vandalism, and various spare parts are also available. Length including mounting thread is 92 mm, length including silent rubber is 72 mm, without silent rubber 55 mm, height 18 mm, depth 16 mm. Glass length is 44 mm. available in chrome, black and matt chrome.

THUNDER MAX

EFI made simple.

ThunderMax ECM with Integrated Auto-Tune System

Get The Performance Your EFI Equipped Bike Deserves! Would you like to have full control of your EFI system, freedom to make major or minor adjustments without the need for a dyno or a degree in computer technology? Here is a simple solution - ThunderMax with Auto-Tune! The ThunderMax is an industry award winning product that replaces the factory module and is not an add-on box or signal modifier. The ThunderMax is purpose built to deliver uncompromising performance, but you don't have to be an experienced technician to install it, program it, or make adjustments.

Just how easy is it? Installation is a straightforward replacement of the factory module and oxygen sensors. The ThunderMax software contains hundreds of base maps that cover over 80% of popular factory and aftermarket combinations, each dyno-developed on real motorcycles. Choosing a basemap is a quick & easy process thanks to the software's sorting filters; loading a map takes less than a minute. After that you're ready to start the motorcycle, let the bike warm up at idle to operating temperature and you're ready to ride! During your ride, the ThunderMax Auto-Tune system analyzes the air/fuel ratio read by the wide-band oxygen sensors at warp speed after every cylinder fire and makes any necessary adjustments to the injector pulse width to achieve the desired air/fuel ratio while compensating for variations in injectors, fuel pressure, throttle body or exhaust flow. With every tank of fuel, at any temperature or elevation, your engine's tune is optimized by ThunderMax.

Simply put, ThunderMax is the most advanced, yet user friendly, performance engine management system you can buy for your Harley. Using the supplied ThunderMax software and communication cable allows you to adjust and monitor virtually every parameter in the system. Installation and How-To Videos are available on-line (You-Tube – ThunderMaxAV).
